

**Hardware Included:** (1) Drywall Anchor  
(1) Screw

**Tools Required:** Phillips Screwdriver, Pencil,  
Stud Finder

The hardware included with this item is meant for drywall or stud mounting only. If your wall is made from another material such as concrete or plaster, please consult your local hardware store for assistance in selecting the correct hardware. Mounting to wood studs wherever possible.

This item includes one saw-tooth bracket located on the back to allow the item to be hung on a wall.

### Mounting Instructions:

1. With the help of another person, hold the mirror upright (with the saw-tooth bracket facing up to the ceiling) and against a wall at a desired mounting location so that the back of the mirror touches the wall directly. Use a pencil mark on the wall at the top of the mirror adjacent to the saw-tooth bracket. This mark will be the insertion point for the mounting hardware. Remove the mirror from the wall and set aside.
2. Use a Stud-finder to determine if the mark of Step (1) happens to align with an internal wall stud or not. If it does, do not use the anchor as the provided anchor cannot penetrate wood studs. In this instance, use a Philips screwdriver to secure a screw directly into the wall and stud at that mark. Rotate the screw clockwise until the screw head is about 3/8 inch from the wall.
3. If the mark does not align with a wall stud, use both the anchor and the screw. To install the anchor, use a Phillips screwdriver to engage an anchor. Position the anchor tip against the marks on the wall and rotate it clockwise as you firmly push the anchor into the wall. The anchor will drive itself into the wall when you rotate it, while applying an even pressure. Continue rotating until the flange of the anchor becomes even with the wall surface. Do not over-tighten.
4. Use the screwdriver to secure a screw into the installed anchor. Rotate the screw clockwise until the screw head is about 3/8 inch from the wall.
5. Mount the mirror on the wall by hanging the saw-tooth bracket over the protruding screw head as the illustration shown. The screw will therefore support the full weight of the mirror.

### Care Instructions:

- Wipe with a soft, dry cloth.
- Do not use abrasive or strong chemical household cleaners.
- A household glass cleaner may be used for the mirror surface – spray the cleaner on a clean cloth first and then use the cloth to clean the glass. Do not spray the cleaner directly onto the glass or frame surfaces.
